

Is this sender on file?

Paste a job message. Daju checks the name, number and email against the government registers of Nigeria, Kenya, Uganda and Ghana.

usedaju.vercel.app · [@DajuCheckBot](https://t.me/DajuCheckBot) on Telegram

THE PROBLEM

The company was real. The person wasn't.

The common job scam in these four countries no longer invents a company. It borrows the name of a **real, licensed recruitment agency** and swaps in the scammer's own WhatsApp number. The message looks right. Only the contact is wrong.

EEMIS · UGANDA · LICENCE E26050027

**Moonlight Recruiting Agency Uganda
Ltd**

On file: +256 702 022 113

In the message: +256 756 000 111

STOP · Name is on file, contact is not

The register entry is real (EEMIS, snapshot 24 Sept 2026). The message is a composite built from the pattern in official warnings.

WHY NOW

751

Kenyans rescued from Myanmar scam compounds since 2022

Kenya MFA to the Senate, May 2026

156

Nigerians rescued from scam centres, Jan to Jul 2026, lured by fake IT and customer-service jobs

NAPTIP, July 2026

275

recruitment licences revoked by Uganda's labour ministry in one month

PML Daily, April 2026

8 Sept

Ghana announces it will publish its list of licensed agencies

GBC, September 2026

The official advice is to check the register. Nobody made the register checkable from a WhatsApp message.

WHY NOT JUST ASK A CHATBOT?

A chatbot gives an opinion. Daju gives a lookup.

THE QUESTION	GENERAL AI CHATBOT	DAJU
Is this agency licensed today?	Guesses; no dated register	Four registers, each with its date
Is this their real phone or email?	Cannot know	Compared with the contact on file
Did this employer really send it?	Cannot know	Proved by the company's DNS record
Is this contract clause legal?	May invent a section	Labour Act section or court judgment
Same message, same answer?	Not guaranteed	Same rules, same stamp

Daju can use a language model to tidy what it reads and to translate replies. No model ever decides a stamp.

THE PRODUCT

What one check does

Reads

Names, numbers, emails, domains and amounts in the message

Looks up

All four agency registers at once

Compares

The contact in the message with the contact on file

Warns

21 patterns from official warnings, 6 contract clauses against labour law

Replies

The reply to send, and the official hotline for your country

Also checks the sender's domain: age, mail records, lookalikes, and whether its website is live and names the company.

THE CARD

One stamp. Every claim sourced.

Stop · money before work, wrong contact, expired licence, a known lure

Caution · signals worth checking before you reply

On file · the register and the contact both match

Not on file · normal for a direct employer; here is how to check it

Each card has a link and a WhatsApp preview image, so it can be shared straight into the group the scam came from.

FOR EMPLOYERS

Scammers copy names. They can't copy a DNS record.

1. Prove the domain

One TXT record. No paperwork, no account password.

2. Send verified offers

Offer links and job posts show candidates a verified sender.

3. Catch impostors

Your name from any other address is stamped Stop.

Tested live on 26 Sept with austinchris.me: the company name from a Gmail address or a WhatsApp number gets Stop; from careers@austinchris.me it gets On file.

REAL DATA

2,990 records from four governments

COUNTRY	REGISTER	ENTRIES	SNAPSHOT	HOLDS
Nigeria	NELEX, Ministry of Labour	1,186	28 Sept	Email, CAC flag
Kenya	NEA, via diaspora.go.ke	1,295 (515 valid)	18 May	Licence, validity
Uganda	EEMIS, Ministry of Labour	187	28 Sept	Phone, licence dates
Ghana	GLMIS, Ministry of Labour	322	28 Sept	Email, location

Re-read every Monday, automatically; the difference is committed. 24 Sept: **5 Ugandan agencies left EEMIS**. 28 Sept: **3 more left**.

Kenya's NEA portal blocks connections from outside Kenya; its register is read from the State Department for Diaspora Affairs mirror.

WHERE IT LIVES

Where the message arrives

-  **Web app** · paste text, or drop a screenshot read on the device
-  **Telegram** · forward it to @DajuCheckBot, get the card back
-  **Replies** · English and Pidgin, six more languages by translation
-  **JSON API** · the same engine for job boards and HR tools
-  **Radar** · live counts of stamps, lures and reports

TRUST

Four rules the product keeps

It never says "safe"

It says what the records say, and no more.

Every claim has a source and a date

Register snapshots, Act sections, court judgments, official warnings.

No model decides a stamp

Rules decide. A model only tidies extraction and translates replies.

It says what it can't know

A company outside the agency registers? It opens the official CAC, URSB or ORC search for you.

BUSINESS MODEL

Job seekers never pay

Verified employers

Free first roles, then a monthly plan with a log of impersonation attempts against the company's name.

API for platforms

Job boards and HR tools pay per thousand checks to stamp every listing.

Licensed-agency programme

A modest annual fee to keep the record and real WhatsApp line accurate.

Data partnerships

Anonymised trend reports for ministries, anti-trafficking agencies and IOM.

Not for sale: pasted messages, reporter identities, or a badge. Verified means a domain was proved, never that a fee was paid.

BUILT THIS WEEK

Live, open source, running on free tiers

- Built 22 to 27 Sept 2026, 40+ commits
- Live at usedaju.vercel.app
- Telegram bot @DajuCheckBot
- MIT-licensed code on GitHub
- Next.js, Supabase, Vercel, GitHub Actions

NEXT

From tool to trust layer

- WhatsApp number, after Meta business verification
- Company-register rows for direct employers
- A pilot with one job board or HR platform
- Replies written by native speakers in Igbo, Yoruba, Hausa, Swahili
- Ghana's licensed list, once published

Before you reply, **be sure.**

Dájú is Yoruba for certain.
